DETAILED ACTION

Allowable Subject Matter

1. Claims 1-11 are allowed.
2. The following is an examiner's statement of reasons for allowance: the allowability resides in the overall structure of the device as recited in independent claim 1, because claim 1 recites: "at least one axial channel interposed between the outer surface and the inner surface." The aforementioned limitations in combination with all remaining limitations of claim 1 are believed to render the claims and all claims dependent therefrom patentable over the art of record.

Note: See attached fig. 6A of Sasaki et al. & fig. 2 of Williams for elements representing limitations claimed in the instant application.

US 5204806 to Sasaki et al. is considered a close reference to the instant application. Sasaki et al. disclosed a housing (1) (see, fig. 6A), a cylindrical wall (see, wall of (1)) defining a central axis (see, center point along line B-B), a central compartment (see, fig. 6A), an inner surface (see, fig. 6A), an assembly support surface (see, fig. 6A) comprising a microelectronic assembly (3), but is silent specifically as to channels adapted for conveying cooling gas.

US 4756644 to Williams is considered to a close reference to the instant application. Williams disclosed a housing (10), comprising a cylindrical wall and channels (34) on a flange (28) adapted for conveying cooling gas through the housing (10).

Although, the cited references are considered the closest references to the instant application, the central axis formed by the channels (34) of Williams will overlap the axial channel of Sasaki et al., located on the microelectronic assembly (see, fig. 6A of Sasaki et al.). The flange (28) of Williams is designed to be secured to a cylindrical outer wall of a housing, via welding, and would clearly overlap the microelectronic assembly located in the annular space of Sasaki et al. Furthermore, Sasaki et al. is silent as to mounting any such cooling channel structure between the solid wall of the cylindrical housing (1).

The Examiner has cited the following: US 6880335 B2, US 5105337, US 5121188, US 6137171, US 5621617, US 5794687, US 6346,000 B1, US 7030486 B1, US 20030185689 A1, US 6404637 B2, US 6665182 B2 & US 6404636 B1 are considered pertinent references to the instant application.

None of the cited references either alone or in combination is believed to render Examiner believed to render the present invention unpatentable as claimed.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
